Lab notes — simple pendulum

We timed 20 swings of a 1.0 m pendulum three times: 40.2 s, 40.0 s and 40.4 s. The mean time for 20 swings was 40.2 s, so the period was 2.01 s. Doubling the mass of the bob did not change the period.

Lab notes — titration

25.0 cm³ of sodium hydroxide was titrated with 0.10 mol/dm³ hydrochloric acid using phenolphthalein. The indicator turned colourless after 22.5 cm³ of acid on average, so the alkali's concentration was 0.090 mol/dm³.
